## EDUCATION

---

- **Indian Institute of Technology Mandi** Mandi, India  
*Bachelor of Technology in Computer Science Engineering; CGPA: 6.6/10.0* Aug. 2016 – Present
- **PVP Junior College, Pravaranagar** Ahmednagar, India  
*High School; Percentage: 77.8* May 2015
- **New English School, Kankuri** Ahmednagar, India  
*Class 10th; Maharashtra State Board; Percentage: 78.73* May 2013

## PROGRAMMING SKILLS

---

- **Languages:** C, C++, shell, Assembly, Arduino
- **Web:** PHP, MySQL, JavaScript, CSS, HTML

## PROJECTS

---

- **Application Process for Mechanical Workshop, IIT Mandi:**  
Portal for processing product making requests. Built on PHP framework Laravel. Interactive User Interface with uploading the CAD model of the product.
- **Lab Equipment Booking Portal, BioX Lab, IIT Mandi:**  
An equipment booking portal for laboratory equipments. Built on PHP based framework Laravel. Webapp to book slots for the equipments by LDAP login. Link: <http://biolab.iitmandi.ac.in> . (This is only accesible from IIT Mandi Intranet.)
- **Financial Money Management and Tracking Tool:**  
Webapp that helps to Manage and Track money inside an Institute. Generate bills, document and Audit them(a feature). Done in a team of four. Built from scratch using PHP,AJAX, HTML,CSS, MY-SQL and involved Server handling.
- **Sharing and Auction Platform:**  
The website that enables the people of IIT Mandi to Optimize the use of all the resources that are within the college by sharing them within a group or by selling them of at the best price that can be achieved within the college. This project was done in a team of four. Built from scratch using PHP,AJAX, HTML,CSS, MY-SQL and involved Server handling.
- **Blockchain Based Documenting Software:**  
This Software creates a platform for Forgery proof documenting and storage using Blockchain. Grabbed 3rd prize for a Block-Chain based Software in the Topcoder Hackathon. The Software was implemented by manipulating a Ethereum Smart contract and passing various encrypted user data along the transaction. This project was done in a team of Three. Built using PHP,HTML,CSS and involved Solidity, Server handling, encryption-decryption.
- **A System for Accident Free Roads:**  
A product that enables a user to handle traffic on hilly roads having sharp turns. Used arduino and accelerometer to detect vehicles and process the traffic data. Implemented a priority queue for giving priority to the sides of vehicles.

## RELEVANT COURSEWORK

---

- **Artificial Intelligence:** Ongoing
- **Formal Languages and Automata Theory:** Ongoing
- **Large Application Practicum:** Ongoing
- **Communicating Distributed Processes:** Ongoing
- **Advanced Data Structure and Algorithm:** Nov 2017
- **Information and Database Systems:** May 2018
- **Computer Organization:** May 2018
- **Applied Database Practicum:** Nov 2017

## AWARDS

---

- **TopCoder Hackathon:** 3rd Position in 20 Teams
